

Additional FieldNotes Modules

WDS Solutions offers a number of additional modules for our FieldNotes data acquisition software. This affords our clients the ability to pick & choose which modules they want enabled on their FieldNotes licenses. WDSS FieldNotes can be custom tailored to suit each client's unique needs and provide the necessary features required in your daily operations.

These modules include:

WDSS MBConfig

WDSS MBConfig is our Modbus setup and connection module. This enables users the ability to connect their copy of WDSS FieldNotes to a sensor package via a Modbus connection.

Capable of configuring data readings, when FieldNotes is paired with MBConfig it will streamline your data acquisition process by easily integrating your sensor array into FieldNotes.

WDSS Advanced Meters:

WDSS Advanced Meters is our advanced calculations module. It includes many built in calculations required for advanced data collection. These include: GOR2, advanced oil properties, shrinkage, and many more.

This module is necessary for most advanced testing and reporting in modern today's oil field.

WDSS WITS:

WDSS WITS module is used to transmit test data from FieldNotes to an offsite 3rd party WITS server. The WDSS WITS module is vendor neutral and will communicate to any 3rd party WITS server supporting the appropriate protocols for WITS Level 0 Record 18.

For more information and pricing on these modules, please contact sales@wds-solutions.com.
